

HOW DO THE SPRINGLIFE POLARIZERS WORK?

BY RANDOLPH W. MASTERS
SPRINGLIFE GLOBAL POLARITY INC.
JUNE 1999

Many people have asked about Springlife Polarizers, thinking that perhaps they work on the same principles as magnets. The answer is an unequivocal "no", but the question remains: what are the Springlife Polarizers, and how do they work? This short introductory article is presented as a "Polarizer-101" discussion.

COMPOSITION

The Springlife Global Polarity company produces and sells a variety of "polarizers" that use a non-electric technology discovered by its founder Dr. Ethel Starbard-Webb, Ph.D. over 40 years ago. Each polarizer, regardless of its casing design and construction, contains a proprietary blend of land minerals and sea vegetation substances representing a balance of the entire planet. These are treated and blended so as to generate the Springlife Polarizing Field effect.

These specific sea substances act like antennae, tuned to receive and radiate specific life-enhancing rays or particles. In this sense, they act as a transceiver, both receiving and transmitting continuously. The select proprietary land minerals were added to enhance and increase the ability of the sea substances to perform faster and to cover a greater range. The land minerals amplify the attraction and distribution of these life rays.

The specifically designed containers that the materials are placed within act as a tuned resonant cavity to further amplify and distribute this life force energy. The metals in the containers also have specific interactive functions with the ingredients in the formula. In addition, both the size and shape of the containers have a determinate function on energy enhancement. Many of the casings are manufactured to one ten-thousandth of an inch tolerance and tuned to specific sizes, dimensions and important life-force-related wavelengths.

All of the Springlife products incorporate the principles of sacred or archetypal geometry as found in sacred sites and famous monuments throughout the world, all of which are noted for their beauty and energy-augmenting qualities. We found that using casing sizes built around the famous ratios found in nature greatly improved both the polarizers' appearance and performance. Every dimension in the construction of our products is important to the final synergistic effect where the sum of all the factors contributes to a leap in product performance, look, feel and quality.

MECHANISMS OF ACTION

In the original discovery, it was noted that the properly prepared sea substances would concentrate the cosmic particles to such a high degree that the toxic vortex spin of many tested substances would reverse direction and the toxicity would be neutralized. This reversal of spin direction is called "reversal of polarity".

It has been observed for ages that north of the equator, water going down a drain spins clockwise, and south of the equator just the opposite is true (this is known as the Coriolis Effect). In the northern hemisphere, toxic substances and toxic vortices spin counter-clockwise, as do the "destructive" forces of nature such as hurricanes, tornadoes, cyclones and earthquakes. Perhaps "corrective forces" would be a more honorable and correct term than "destructive", as nature sends these forces to cancel out, correct or rebalance an already out-of-balance condition.

When things begin to break down, such as soil becoming depleted of essential life-embracing minerals, the frequency of the soil is altered and it puts out a signal to the natural forces to assist in correcting the situation. Where an area is very toxic, a vacuum forms over the area, altering the proper flow of life-giving cosmic radiation. When this happens, Earth's healthy natural electrical field is diminished. This is especially noted around oil fields, for example, where people, plants and animals display many toxic side effects and symptoms from a negative electric field effect. Once a "corrective" force of nature arrives, it targets the area that is summoning it by the law of "like attracts like". The corrective force acts like a giant acupuncture needle, puncturing the negative vacuum in an attempt to open the area back up to the balanced life-giving flow. The Springlife formula acts in a very similar manner, copying the corrective forces of nature and "re-polarizing" the toxic vortex movement, but without the destructive effects.

The concentration of specific minerals in the Springlife formula influences the vortex direction to move toward the life-embracing direction of clockwise motion north of the equator. When a toxic substance, such as sodium cyanide, is re-polarized and its counter-clockwise spin changes to a clockwise spin, the cyanide becomes neutralized and its toxic effect is voided or canceled. The sodium cyanide cannot progress forward beyond neutral to become life enhancing because it was not created with that intent.

One example of the effects of repolarization is in rancid olive oil. When it is properly re-polarized and the negative or toxic vortex spin (due to its rancidity) is voided, it continues on past the neutral positive into a positive and clockwise vortex energy spin. Once the vortex spin of food has been restored to a positive direction, its flavor then reflects a more pleasant taste and odor because its life force has been brought to a higher and healthier level and the rate of spoilage is slowed remarkably. One could say that the increased positive vortex spin enables the food substance to give off or release more life-giving energy, as reflected in its higher vibrational frequency. This higher, positive spin frequency then suggests that more available life force is supplied or stimulated by the substance. This is comparable to the difference between food that is "cooked to death" with the enzymes "killed off" and food that is alive with rich enzymatic life or light activity.

When the word "spin" is used in this article, it refers to the movement of the energy flow, which is in a vortex- or funnel-shape. The spin goes all the way down past the known sub-atomic particles such as electrons, neutrons and positrons, etc. Pendulums can be used effectively to detect a change of vortex motion, and there are also some scientific devices that can detect vortex action. Most technological devices have only a three-dimensional orientation and are unable to detect the subtle energy of a fourth, or higher, dimensional existence. This is the reason that re-polarized wine that contained added sulfites prior to repolarizing still contains those added sulfites after re-polarizing in some scientific tests. The tests do not show that the wine, which still needs a preservative, now contains a healthy, properly polarized preservative which is beneficially compatible.

APPLICATIONS

In addition to helping to detoxify food and water, Springlife Polarizers are effective in helping injuries and trauma. Some users have noted that when injuries such as burns, insect bites, cuts and percussive blows to the body were re-polarized as soon as the injury occurred, bruises and scars did not develop. The explanation for this is that the healthy electron flow is disturbed by the injury, and when the electron flow is restored in the body and once again moving in a coherent manner, then the body can better synchronize with the earth's natural electrical, healing, or creative forces. Its own healing abilities can then perform as they were intended. It has been noted how quickly animals heal themselves after a re-polarization takes place. This is partially due to the animals' freedom from limiting belief systems concerning energy and natural forces. Their bodies respond to what is "natural". An analogy to help understand how an injury or "dis-ease" affects the body is that of an electrical cord with a damaged area that prevents the proper flow of electricity from traveling through the wires. This is what a damaged and chaotic electron flow in the body is like.

The products' repolarizing benefits include a greater balance with the natural electromagnetic field effects of the

earth. The ability of humans, animals, birds and other creatures to maximize and call forth their own body's healing potential can be greatly augmented and fortified when the flow of life force and positive earth healing energy is readily available. Cell-to-cell communication can also be greatly improved in a properly polarized atmosphere of correctly charged particles.

Springlife Global Polarity has had a 40-year track record of excellent, repeatable results. The "technology" behind the products utilizes the laws of nature and therefore they are able to assist nature rather than replace or circumvent it. The Springlife Polarizers are thus able to intervene and assist without causing harm. Springlife products are free from the five "I's": Incision, Insertion, Injection, Ingestion and Inhalation.

By observing nature and exactly duplicating what nature does, not what humans THINK nature does, Springlife has been able to create devices that collect and give off totally user-friendly, non-invasive and life-force-respecting energies. In this way the company has been able to create nature-assisted and nature-enhancing products that help restore balance and a healthy spin orientation with ingredients that, with proper care, never wear out or need replacing.

Scientists in many countries have been testing Springlife products to better understand them. In most cases, excellent results are repeatedly observed thus generating many new questions. Scientists and researchers are having to expand their knowledge, training and "comfort zones" as they realize how little they really know about how nature works. They must embrace a world where science, technology, nature and spirit are working together in perfect harmony obeying the true laws of creation. Until satisfactory answers are provided, we can count on Springlife Global Polarity Products to keep delivering repeatable and often unexplainable results--results we can benefit from even if we don't know the whole picture. We can taste and feel the difference while we are trying to figure out what just happened!

SPRINGLIFE POLARIZERS

What are they? All Springlife Polarizers are best described as antennas that attract amplified chi (life-force) energy which originates from Universal Source. This energy bombards the Earth plane at a 45-degree angle and is the sustenance of all life. Polarizers are the formulation of just the right mixture of plants and mineral substances. This formulation is the attracting factor of the Springlife Polarizer. The polarizer containers are tuned resonant cavities employing the use of sacred geometry and energy field research.

How do polarity products work? They are energy attractors which polarize energy fields that produce negative toxic effects. For example, when a substance is toxic or damaged, the natural vortex is reversed. By polarizing this substance, it is no longer detrimental to the environment or to the physical body. According to Sir Lawrence Bragg, Nobel Prize Winner, *"life on the planet can be described as oriented to the right, and man is like a 'right-handed cork-screw.' Any 'left-handed cork-screw orientation' would be poisonous to him."* Dr. Reuben states, *"that a compound with the same formula can be poisonous if the polarization is to the left and non-poisonous if the polarization is to the right. Thus, if you change the polarization of man-made energy fields and the products produced by the machines that utilize this energy, toxins and dangerous by-products can become neutralized."* (It should be noted that this spin is reversed in the southern hemisphere.) Examples of counter vortexes in nature are hurricanes and tornadoes. These forces are not in synergy with normal energy patterns, consequently they create catastrophic results. Dis-eases are the result of electrons chronically spinning in a direction counter to healthy body tissues.

How do polarizers differ from magnets? Magnets attract electromagnetic fields created by the north and south poles of the Earth. Springlife Polarizers attract beneficial cosmic radiation that originates beyond the planet Earth.

Directions for use: Wear as a pendant during waking hours. Hold polarizers for two minutes above substances you wish to neutralize. Place polarizers on or near electrical appliances or computers in your home or office.

Possible Uses:

- Helps neutralize harmful radiations (TV's, microwaves, computers, power lines)
- Helps neutralize harmful cosmetic and personal care products
- Helps detoxify foods and drinks, and restore flavor
- Helps reduce harmful effects of chlorine, tobacco, caffeine, pesticides
- Helps synergize the home or office environment
- Helps protect and polarize the body from toxins and allergens
- Helps increase emotional stability and well-being
- Helps increase personal and physical energy
